

Howard Little Excavating Ltd.

3 1/2" / 95 mm Material

4" / 100mm material is manufactured by crushing slate to a maximum size of 4" / 100mm. Its primary use is as a base material for driveways and parking lot where there is a soft sub-base, and to dry up soft areas in roadways. This material makes an extremely good base for building footings and driveways when graded and compacted, applied in a 6" to 8" layer.
