Clearstone $\frac{3}{8}$ " to $\frac{5}{8}$ "

Clearstone $\frac{3}{8}$ " to $\frac{5}{8}$ " is a material manufactured by crushing larger rock to reduce it in size to $\frac{3}{8}$ " to $\frac{5}{8}$ ". Its primary use is for drainage work and can also be used under floors, basements, backfilling against walls and swimming pools. Due to its size, this material is easily managed by hand. It is not recommended for driveways as it is a loose material and does not compact well.
