

Howard Little Excavating Ltd.

Clearstone 3/4" Blue

This product is created from a deposit of quartz, which is blasted to a size ranging from 6" to 24" in size, then crushed to 3/4" in size. The fines are screened off leaving a product ranging from 5/8" to 3/4" in size which is great for drainage on driveways around drainage pipes. This product is used in the mixing of concrete.

After being washed by mechanical system or by rain fall, this product becomes very clean. This product is NOT recommended for driveway use by Howard Little Excavating. It does not compact and is very hard to drive a bicycle on or push a carriage over.
