

# Howard Little Excavating Ltd.

## Ornamental Stone

This product is blasted from large deposits of granite, then crushed to a 1" or 25mm size and the fines are screened off. The remainder is an average of  $\frac{3}{4}$ " to 1  $\frac{1}{8}$ " in size creating a pretty pinkish red surface when placed on the ground around trees and shrubbery. This product is very clean and looks great on the ground.
