Screened Sand

Screened sand is reddish brown in colour. We have many different qualities of sand thanks to the Annapolis Valley sand deposits on the valley floor in Kings and Annapolis Counties of Nova Scotia. We screen sand for icy road conditions, septic disposal sand with ranges from 2-10 minute and 7-15 minute sand. We mix sand with heavy topsoil to lighten soil for aeration to handle wet conditions.

Sand is used in concrete making, asphalt paving, pipe bedding, under floor slabs and backfilling foundations in heavy soil areas to lighten the pressure on concrete walls. Sand can also be used as draining material.
